

#1 Cloud Data Management

Veeam Cloud Connect Backup

FAST, SECURE BACKUP TO THE CLOUD

Get physical and virtual backups off site to the cloud without the cost and complexity of building and maintaining a cloud infrastructure. Veeam Cloud Connect Backup provides a fully integrated, fast, and secure way to back up your data to a service provider's cloud repository.

Simply choose a service provider and point your backups or replica jobs to the cloud — cloud-based backup has never been so easy.

Key Capabilities

Veeam Cloud Connect Backup delivers powerful and reliable features and functionality to help you avoid the risk of catastrophic data loss, including:

- **Hosted offsite backups:** Get your physical and virtual backups offsite to a hosted cloud repository through a secure SSL connection with no additional Veeam licensing required.
- **Complete visibility and control:** Access and recover data in hosted backup repositories directly from the backup console; track cloud repository consumption and receive reminders for hosted storage renewals.
- **A modern backup architecture:** Leverage Veeam's modern backup technology, including Backup Copy jobs with Built-in WAN Acceleration, forever incremental backups, GFS (grandfather-father-son) retention policies and more—all built into one product.
- **End-to-end encryption:** Rest easy by encrypting all data at source (before it leaves your network perimeter), in flight and at rest, without negatively impacting the data reduction ratios of built-in compression and WAN Acceleration.
- **Veeam Cloud Connect licensing:** Veeam Cloud Connect Backup and Replication is included within Veeam Availability Suite™, Veeam Backup & Replication™, Veeam Backup Essentials™, and Veeam Agent for Microsoft Windows for all end users at no additional charge and with no additional licensing required.

The 3-2-1 Rule

The 3-2-1 rule states you need to keep three copies of your data, stored on two types of media, with one copy being off site. But getting backups off site can be challenging due to limited bandwidth, exploding data volumes, and a lack of resources required to build or maintain a true offsite backup repository.

With Veeam Cloud Connect, you can master the 3-2-1 rule without dumping money and resources into a second site or adding bandwidth—just leverage cloud backup repository services from a Veeam Cloud & Service Provider and take advantage of Veeam's Built-in WAN Acceleration technology and so much more.

"Deploying Veeam and partnering with OffsiteDataSync were two of the smartest decisions we made. Our backup copies are safely offsite, yet available at a moment's notice."

Jason Weinstein
VP, Data Center Operations
Premise Health

"The cost savings with Veeam, along with better allocation of resources, time savings, and equipment upgrades, has allowed us to reduce backup and disaster recovery costs by 30 to 40 percent... When we made the switch to Veeam and iland, we had no hesitation that we had the very best scenario."
